Author Index for Vol. 11

Anderson, R., 710
Antion, K., 623

Bauspiess, F., 427
Bergen, H. A., 445
Black, G., 699
Bowe, R., 529

Caelli, W. J., 463
Cerullo, M. J., 620
Cohen, F. B., 140, 563, 641
Collier, P., 307

Damm, F., 427
David, J., 607
Davida, G. I., 253
Desmedt, Y. G., 253
Dixon, R., 307
de Vries, T. P., 315

Fernandez, E. B., 357

Gilbert, F., 508
Graham, I. G., 237
Gritzalis, D., 149, 733
Gritzalis, S., 733

Hardy, G., 711
Harn, L., 747
Hatunic, E., 653
Highland, H. J., 4, 35, 110, 134, 145, 200, 227, 247, 294, 341, 390, 441, 498, 531, 592, 625, 682, 715
Hogan, J. M., 445

Jajodia, S., 547

Kafura, D., 57
Kates, J., 327
Katsikas, S., 149, 733
Keklikoglou, J., 149
King, J., 707

Laribi, A., 57
Lathrop, D. L., 421
Laun, R., 173
Lawrence, L. G., 407
Liepins, G. E., 347
Lin, H. Y., 747
Longley, D., 75
Lunt, T. F., 41

McDuffie, R. S., 620
Madsen, W., 233
Marston, C., 307
Menkus, B., 19, 121, 211, 417, 525, 703
Muftic, S., 653

Naccache, D., 581
Norman, G., 412

Olivier, M. S., 259

Paans, R., 407

Computers & Security, 12 (1993) 201–205

Subject Index for Vol. 11

Access control
  a protection model incorporating both authorization and constraints 57
  a zero knowledge probabilistic login protocol 733
  asymmetric user authentication 173
  determining access rights for medical information systems 149
  on blind signatures and perfect crimes 581
Accreditation ranges
  multilevel security issues in distributed database management systems—III 661
Administration
  information security administration model: a management model to help identify the best practices of the administration function within the security group 327
Anti-virus products. *See* Viruses
Arithmetic coding
  data security in a fixed-model arithmetic coding compression algorithm 445
Auditors
  computer contingency plans and the auditors: a survey of businesses affected by Hurricane Hugo 620
Authentication
  a software authentication system for information integrity 747
  a zero knowledge probabilistic login protocol 733
  an axiomatic theory of trust in secure communication protocols 163
  asymmetric user authentication 173
Authorizations
  a protection model incorporating both authorization and constraints 57
Automation
  the security impact of networks, telecommunications, and office automation 227
Bell-LaPadula model
  lattice-based enforcement of Chinese Walls 753
Biometrics
  biometrics futures 128
Blind signatures
  on blind signatures and perfect crimes 581

Chinese Wall policy
  lattice-based enforcement of Chinese Walls 753
Chip cards
  passports and visas versus IDs 253
Chosen plaintext attack
  data security in a fixed-model arithmetic coding compression algorithm 445
Classification of medical data
  determining access rights for medical information systems 149
Coding theory
  defense-in-depth against computer viruses 563
Communication protocols
  an axiomatic theory of trust in secure communication protocols 163
Computer security. *See* Security
Computer warfare
  government-sponsored computer warfare and sabotage 233
Computer worms
  a formal definition of computer worms and some related results 641
Constraints
  a protection model incorporating both authorization and constraints 57
Contingency plans
  computer contingency plans and the auditors: a survey of businesses affected by Hurricane Hugo 620

0167-4048/93/$6.00 © 1993, Elsevier Science Publishers Ltd.

Cost-effectiveness
cost-effectiveness of anti-viral software 217
Cryptanalysis
data security in a fixed-model arithmetic coding compression algorithm 445
Cryptography
a software authentication system for information integrity 747
an automatic search for security flaws in key management schemes 75
asymmetric user authentication 173
defense-in-depth against computer viruses 563
requirements for cryptographic hash functions 427

Data compression
data security in a fixed-model arithmetic coding compression algorithm 445
defense-in-depth against computer viruses 563
Data encryption
re-examining the data encryption standard 703
Data theft
breach of system security and theft of data: legal aspects and preventive measures 508
Database security
a protection model incorporating both authorization and constraints 57
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463
building a secure database using self-protecting objects 259
eliminating polyinstantiation securely 547
multilevel security issues in distributed database management systems—III 661
security in database systems: a research perspective 41
DES
an automatic search for security flaws in key management schemes 75
CISS: generalized security libraries 653
Dictionaries
OPUS: preventing weak password choices 273
Digital cash
on blind signatures and perfect crimes 581
Digital signatures
on blind signatures and perfect crimes 581
Discretionary security
security in database systems: a research perspective 41
Distributed systems
distributed systems security 24

Electronic data interchange
understanding EDI security issues 525
Error correction codes
defense-in-depth against computer viruses 563
Error detection codes
defense-in-depth against computer viruses 563
Europe
computer security evaluation: developments in the European ITSEC programme 518
Expert systems
an automatic search for security flaws in key management schemes 75

Fault-tolerant computing
defense-in-depth against computer viruses 563
Fires
a high rise building fire case study 19
Fixed model
data security in a fixed-model arithmetic coding compression algorithm 445
Fraud
a report on the joint CIMA and IIA computer fraud survey 307

Government sponsorship
government-sponsored computer warfare and sabotage 233
Great Chicago Flood Of 1992
the lessons of the great Chicago Flood of 1992 417

Heterogeneity
multilevel security issues in distributed database management systems—III 661
High rise buildings
a high rise building fire case study 19

Hurricane Hugo
computer contingency plans and the auditors: a survey of businesses affected by Hurricane Hugo 620

IBM Transaction Security System
the implementation of TSS 315
IDs
passports and visas versus IDs 253
Information protection
a software authentication system for information integrity 747
Information security
information security administration model: a management model to help identify the best practices of the administration function within the security group 327
Information systems
determining access rights for medical information systems 149
Information technology
computer security evaluation: developments in the European ITSEC programme 518
Information theory
defense-in-depth against computer viruses 563
Integrity
a software authentication system for information integrity 747
defense-in-depth against computer viruses 563
Integrity shells
defense-in-depth against computer viruses 563
Intrusion detection
intrusion detection: its role and validation 347
ITSEC
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463
computer security evaluation: developments in the European ITSEC programme 518

Key management
an automatic search for security flaws in key management schemes 75

LAN systems
LAN security standards 607
security aspects of wireless local area networks 421
Lattice models
lattice-based enforcement of Chinese Walls 753
some extensions to the lattice model for computer security 357
Legal aspects
breach of system security and theft of data: legal aspects and preventive measures 508
Likelihood ratio
intrusion detection: its role and validation 347
Local area networks (LANs). *See* LAN systems
Logics of belief
an axiomatic theory of trust in secure communication protocols 163
Login
a zero knowledge probabilistic login protocol 733

Management models
information security administration model: a management model to help identify the best practices of the administration function within the security group 327
Medical data security
determining access rights for medical information systems 149
Medical information systems
determining access rights for medical information systems 149
Message integrity codes
CISS: generalized security libraries 653
Misuse
intrusion detection: its role and validation 347
Multilevel security
eliminating polyinstantiation securely 547
multilevel security issues in distributed database management systems—III 661
security in database systems: a research perspective 41
some extensions to the lattice model for computer security 357

Networks
a zero knowledge probabilistic login protocol 733
an axiomatic theory of trust in secure communication protocols 163

on blind signatures and perfect crimes 581
the PC as a secure network workstation 237
the security impact of networks, telecommunications, and office automation 227

Object-oriented
building a secure database using self-protecting objects 259
Office automation
the security impact of networks, telecommunications, and office automation 227
Open systems
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463
update on open systems security 699
X.400 security 707
Operating systems
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463
defense-in-depth against computer viruses 563
Orange Book
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463

Passports
passports and visas versus IDs 253
Passwords
a zero knowledge probabilistic login protocol 733
OPUS: preventing weak password choices 273
Path context model (PCM)
building a secure database using self-protecting objects 259
Personal computers
PC security issues 412
the PC as a secure network workstation 237
Polyinstantiation
eliminating polyinstantiation securely 547
security in database systems: a research perspective 41
Privacy
on blind signatures and perfect crimes 581
Protection
a protection model incorporating both authorization and constraints 57
determining access rights for medical information systems 149
Public key
an axiomatic theory of trust in secure communication protocols 163
asymmetric user authentication 173

Query processing
multilevel security issues in distributed database management systems—III 661

RACF
RACF security goals comment on a paper by R. Paans 407
Recovery blocks
defense-in-depth against computer viruses 563
RSA
a software authentication system for information integrity 747
CISS: generalized security libraries 653

Sabotage
government-sponsored computer warfare and sabotage 233
Search tree
an automatic search for security flaws in key management schemes 75
Security
an automatic search for security flaws in key management schemes 75
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463
breach of system security and theft of data: legal aspects and preventive measures 508
building a secure database using self-protecting objects 259
CISS: generalized security libraries 653
computer security evaluation: developments in the European ITSEC programme 518
concerns in computer security 211
data security in a fixed-model arithmetic coding compression algorithm 445
introduction to computer security 121
LAN security standards 607
multilevel security issues in distributed database management systems—III 661

RACF security goals comment on a paper by R. Paans 407
security in database systems: a research perspective 41
some extensions to the lattice model for computer security 357
the implementation of TSS 315
the PC as a secure network workstation 237
the security impact of networks, telecommunications, and office automation 227
understanding EDI security issues 525
understanding VAX/VMS security 695
update on open systems security 699
X.400 security 707
Smart card
asymmetric user authentication 173
Software-based fault tolerance
defense-in-depth against computer viruses 563
Standards
LAN security standards 607
re-examining the data encryption standard 703

Tamper-free
passports and visas versus IDs 253
TCB subsets
security in database systems: a research perspective 41
TCSEC
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463
Telecommunications
the security impact of networks, telecommunications, and office automation 227
Testing computer security
defense-in-depth against computer viruses 563
Theft
breach of system security and theft of data: legal aspects and preventive measures 508
Transaction management
multilevel security issues in distributed database management systems—III 661
Trust relationships
an axiomatic theory of trust in secure communication protocols 163
TSS
the implementation of TSS 315

UNIX
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463

VAX/VMS
understanding VAX/VMS security 695
Viruses
a formal definition of computer worms and some related results 641
computer viral risks—how bad is the threat 29
cost-effectiveness of anti-viral software 217
defense-in-depth against computer viruses 563
government-sponsored computer warfare and sabotage 233
the virus authors strike back 602
Visas
passports and visas versus IDs 253

Warfare
government-sponsored computer warfare and sabotage 233
White Book
an evaluation of HP-UX (UNIX) for database protection using the European ITSEC 463
Wisdom & Sense (W&S)
intrusion detection: its role and validation 347
Workstations
the PC as a secure network workstation 237

X.400
X.400 security 707
